

XM-10 IED / Artillery Simulator

Specification Sheet:

This simulator can be used to provide simulation of IED (Improvised Explosive Device) or Artillery shell impact explosion for training troops how to react to an device being detonated in there area of operation.

This device provides a very robust blast wave and flash when operated exceeding 128 decibels.

The unit is of all steel constriction from 4160 DOM tubing. Controls are mounted in water resistance housing on the side with provisions to mount a remote control unit on the exterior of the control box. Unit has a built in carrying handle in the top of unit. Power is provided via an external 12V rechargeable battery that sets on the base plate for easy access and change out.

Activation is via a manual cable supplied with 25' foot of cord or the optional remote control (RSS2) unit that has a 2 channel operation.

Simulator used Oxygen and Propane to provide the blast that is controlled by regulators supplied with the unit. Very easy to setup and breakdown.

Unit weight is 50 lbs:

Unit height is 20":

Base Plate is 14' X 14":

Simulator is self contained except for the gas supply and the hoses are provided with quick disconnects fittings.

Cycle rate is 1 blast every 3 seconds.

Unit is supplied with the following:

XM-10 blast simulator, manual control cable, 2 rechargeable batteries and charger, manual, spare ignition plug, 25' oxygen and propane regulators and gas hose with quick connect fittings.

Customer can supply there own oxygen and propane tanks.
